Control	Key
Move camera around the camp	Mouse
Change day stage	Space
Interact with UI	Left mouse button
Move character to the other site	Hold left mouse button

Table 1: Control Instructions

2 Gameplay

2.1 Characters

Your goal is to help four characters survive the aftermath of a plane crash in the Andean mountains. Each character has specific needs that must be met to ensure their survival: **hunger**, **fatigue**, **depression**, **injury** and **sickness**. These needs can be addressed through interactions at various sites or by using items crafted or found during exploration. Each character has some skills that could help survive the entire group: **strength**, **constitution**, **communication**, **knowledge**, **cooking**, **gathering**, **exploration**, **craftsmanship**, **fishing** and **hunting**.

2.2 Navigating in survivors camp

After the plane crash the plains between stunning Andean mountains became a shelter for the survivors. Here they will gather necessary resources and tools for their survival. In **inventory** you can find gathered or crafted items that can help our characters. The most important part of the camp are the **sites** which will help gather resources and meet vital needs of the characters. Below you can find full list of possible sites:

Site	Description
	**Technology site** where you can research technologies one after another. High **knowledge** gives better results.
	**Crafting site** gives you the possibility to craft other sites that are not available from the start of the game. High **craftsmanship** skill will be profitable. Player can choose a current recipe to craft after they are researched in technology site.
	Talking by the **campfire** may reduce the depression of the characters. **Communication** skill will be very important, as well as number of people talking at once.
	The **sleeping site** provides a safe and sheltered place for the survivors to recover from fatigue. Better **constitution** can make such process even faster.
	**Lumber site** serves as a place where survivors can gather branches and make ropes for their crafting. With high **strength**, they will do it more efficiently.
	In **stone quarry** survivors can collect essential stone materials for crafting. **Strength** will be beneficial in this site as well.
	The **fruit basket** enhances the gathering of Andean fruits, herbs, and medicinal plants, especially when combined with improved **gathering** skills.

	The **bow** will significantly aid in procuring raw food. A high level of **hunting** skill will also prove beneficial in this regard.
	The **fishing rod** will greatly help in catching fish for food. A high **fishing** skill will be very helpful in that regard.
	The **cooking pot** turns raw ingredients into tasty meals. Improving **cooking** skills makes meals even better.

Table 2: Sites and their descriptions

In addition, survivors can explore new areas to the right of the camp at the **exploration** site. With great **exploration** skill, this will certainly help them gather resources and possibly find a way out of their predicament, by repairing the **broken radio** that can be found in the wreckage of your used to be plane.

3 Day stages

In Dead In Andes, the daily routine is divided into three distinct stages: morning, afternoon, and evening.

Morning and Afternoon

In the morning and afternoon, survivors can **perform actions at various sites** and player can **use items** on characters to meet their daily needs.

Evening

In the evening, **site actions are disabled** as characters prepare to rest. The player can only **distribute items among characters** to prepare them to survive the night and the challenges of the next day. It is important to note that

many significant events like a character’s deaths occur only during the night, which means after the evening stage.

4 Game Assets

During the creation of the game, external assets from the following sources were used:

- Nature Landscapes Free Pixel Art - itch.io
- UI asssets pack 2 by Sr. Toasty - itch.io
